Steps of a trading algo

In which order do you want to take these steps?

- A. Retrieve market data, e.g. best bid/ask prices from order books
- B. Sleep
- C. Hedge open positions
- D. Retrieve current positions and compare with max position limits
- E. Send new buy/sell orders
- F. Print and/or export trading, execution and position data
- G. Delete all outstanding orders
- H. Compute new theo's and bids/ask prices to trade (MM)

This could be a possible recipe

1. Delete all outstanding orders
2. Retrieve current positions and compare with max position limits
3. Retrieve market data, e.g. best bid/ask prices from order books
4. Hedge open positions
5. Compute new theos and bids/ask prices to trade (MM)
6. Send new buy/sell orders (taking point 2 into account)
7. Print and/or export trading, execution and position data
8. Sleep
